

# OVPL Process Overview

Anon R, Amulya S, Prakash B H

11 September 2014

Following is the process one needs to follow to get the lab up and running.

- Step 01: Install CentOS on your machine
- Step 02: Install and configure OpenVZ on CentOS (Provides Virtualization Kernel)
- Step 03: Install the dependencies to set up OVPL
- Step 04: Clone and set up OVPL
- Step 05: Test your lab
